

China Set - The Shenzhen set - Chest X-ray Database

Description: The standard digital image database for Tuberculosis is created by the National Library of Medicine, Maryland, USA in collaboration with Shenzhen No.3 People's Hospital, Guangdong Medical College, Shenzhen, China. The Chest X-rays are from out-patient clinics, and were captured as part of the daily routine using Philips DR Digital Diagnose systems.

Number of X-rays:

- 336 cases with manifestation of tuberculosis, and
- 326 normal cases.

Image parameters:

- Format: PNG
- Image size varies for each X-ray. It is approximately 3K x 3K.

Image file names are coded as CHNCXR_#####_0/1.png, where '0' represents the normal and '1' represents the abnormal lung.

The clinical readings of all X-rays are saved as text files following the same file format: CHNCXR_#####_0/1.txt. Each text file contains the patient's age, gender, and abnormality of the lung. (PTB: pulmonary tuberculosis).

IRB Details: The dataset was de-identified by the data providers and was exempted from IRB review at their institutions. The dataset use and public release were exempted from IRB review (No. 5357) by the NIH Office of Human Research Protections Programs.

Citation and Use:

- Please do not share the dataset outside of your research group/ organization, but forward new dataset requests to us.
- Please inform us if you find errors or inconsistencies in the data.
- It is requested that publications resulting from the use of this data attribute the source (National Library of Medicine, National Institutes of Health, Bethesda, MD, USA and Shenzhen No.3 People's Hospital, Guangdong Medical College, Shenzhen, China) and cite the following publications:
 - 1) Jaeger S, Karagyris A, Candemir S, Folio L, Siegelman J, Callaghan F, Xue Z, Palaniappan K, Singh RK, Antani S, Thoma G, Wang YX, Lu PX, McDonald CJ.
